

AI Healthcare Diagnosis Report

Generated On: 2026-04-30 17:53:31

Patient Name: Robin

Patient ID: d665

Age / Gender: 47 / Male

Disease Type: PNEUMONIA

Uploaded File: person24_bacteria_112.jpeg

Prediction Result: PNEUMONIA

Confidence Score: 94.20%

Severity Level: Severe

Emergency Alert: YES

AI Diagnosis Explanation:

The uploaded medical image was analyzed using a trained deep learning model for pneumonia.

The system predicted the condition as PNEUMONIA with a confidence of 94.20 percent.

Based on confidence level, the severity is categorized as Severe.

This AI result highlights possible abnormal findings and should be clinically verified by a specialist doctor.

Medical Image Analysis

Uploaded Medical Scan:

Grad-CAM Heatmap:

Heatmap Interpretation:

Highlighted red/yellow regions indicate areas where the AI model focused strongly while identifying possible disease abnormalities.

Medical Recommendation Summary

Recommended Specialist Doctor: Pulmonologist

Suggested Next Actions:

1. Consult the recommended specialist for clinical confirmation.
2. Carry this AI report along with original scan for further examination.
3. Follow additional laboratory/radiology tests if advised.
4. In emergency-positive cases, immediate hospital consultation is advised.
