

AI HEALTHCARE DIAGNOSIS REPORT

Patient Information

Patient Name : Balaji

Patient ID : d35

Age / Gender : 35 / Male

Generated On : 2026-05-13 21:22:27

AI Diagnosis Summary

Disease Type : MALARIA

Prediction Result : MALARIA INFECTED

Confidence Score : 99.72%

Severity Level : Severe

Emergency Alert : YES

AI Interpretation

The uploaded scan image was processed using a deep learning malaria detection model.

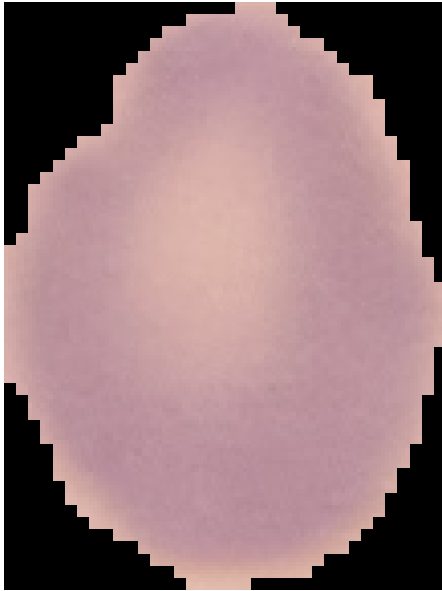

The AI system identified the scan as MALARIA INFECTED with a high confidence score of 99.72%.

Severity analysis indicates a severe level condition based on learned pathological patterns.

This report should be used as an AI-assisted screening document and clinically verified.

MEDICAL IMAGE ANALYSIS

Uploaded Scan Image

Grad-CAM Heatmap

Heatmap Explanation:

Red/Yellow highlighted regions show where the AI model focused most strongly while identifying suspicious pathological abnormalities in the scan.

MEDICAL RECOMMENDATIONS

Recommended Specialist : Pathologist

Suggested Next Steps

1. Visit the recommended specialist doctor with this AI report.
2. Carry original scan/X-ray for further radiological review.
3. Follow laboratory tests and physician advice if symptoms persist.
4. In severe or emergency-positive cases, immediate hospital admission is recommended.

AI Disclaimer

This document is generated by an AI-based healthcare assistant.

It is intended for preliminary screening support only.

Final diagnosis must be confirmed by a licensed medical professional.
